

Summary

Senior engineer & technical lead; 8+ years in full-stack development, platform engineering, and customer enablement:

- **Languages:** Python | Java | TypeScript | Go | SQL | C++
- **Platform/Cloud:** Kubernetes | Docker | AWS | Azure | GCP | Ansible | Terraform | GitLab CI/CD | GitHub Actions
- **Full-Stack:** React | Node.js | PostgreSQL | Redis | REST/gRPC | Protocol Buffers | RabbitMQ
- **LLM & Applied AI:** Claude/OpenAI APIs | MCP Integration | Prompt Engineering | RAG Patterns | Eval Design
- **ML/Data:** TensorFlow | PyTorch | Scikit-Learn | NumPy | Pandas | Computer Vision | NLP | FastAPI / MLFlow Serving
- **Certifications:** AWS Certified Cloud Practitioner | CompTIA Security+ (SY0-701)

Experience

- **Senior Engineering Lead**, Clarity Innovations, Columbia, MD 02/2024 - Present
Technical lead & manager for cloud-agnostic CI/CD platform serving 100+ software teams across AWS/Azure/GCP/OCI
 - Leads customer enablement for 100+ engineering teams: weekly technical sessions with 70+ attendees, processing 80-150 issues per 2-week sprint with SLAs, self-service docs and video library adopted across the customer base
 - Architects secure-by-default CI/CD pipelines to enable 1-click deploys to AWS/Azure/GCP/OCI for 60+ multi-env apps; established org’s first auto-scaled runner pattern, immediate upscale without disrupting existing workflows
 - Designs and maintains IaC (Terraform & Ansible) for reproducible, auditable multi-cloud environments
 - Mentors engineers on DevSecOps best practices; leads technical interchanges for knowledge sharing & development
 - 2024 - Recognized with Award for Excellence in leadership, teamwork, and collaboration impact
- **Senior Full-Stack Software Engineer & Tech Lead**, Kessel Run (U.S. Air Force), Boston, MA 06/2020 - 06/2024
Led 12-member eng team; full-stack development on mission-critical software for 10K+ users, replacing \$1.6B legacy system
 - Tech lead on 4 teams; owned roadmap prioritization, task assignment, and stakeholder communication
 - Designed and shipped an event-streaming platform (Protocol Buffers, RabbitMQ) processing 10-15k events/day across 15 app teams (100 engineers); introduced rehydration mechanism for full state recovery for any downstream consumer
 - Drove organization’s first Kubernetes adoption; established deployment patterns and training for 50+ engineers
 - Deployed forward as Liaison Officer to Al Udeid Air Base, Qatar; served as single on-site technical contact for operational users, collected & mediated feedback between users and product teams back home
 - Hand-picked for rapid outage response team; reduced average restore time to <90 mins, cutting downtime by 72%
- **Developmental Engineering Lead Officer**, U.S. Air Force, Los Angeles, CA 07/2016 - 06/2020
GPS Integrated Circuit and Satellite Communication Systems Engineering Lead
 - Hardware and software engineering lead on GPS integrated circuit and satellite communication programs; led 10-engineer teams, balanced 500+ requirements, and supported \$1.8B in program engineering definition.

Education

- **Master of Science, Computer Science**, Specialization in Machine Learning 05/2019 - 11/2022
Georgia Institute of Technology, Atlanta, GA, GPA: 4.0
- **Bachelor of Science, Computer Engineering** 09/2012 - 05/2016
Boston University, Boston, MA

Additional Information

- **Awards:**
 - Officer/Engineer of the Year: 2022, 2021, 2020, 2019; Academic Excellence: 2013, 2016
 - BU ECE Design Excellence Award (Liquid Rocket Thrust Vectoring Firmware)
- **Projects:**
 - MLOps Model Platform – Production ML serving on self-hosted k3s with FastAPI, MLflow, Prometheus/Grafana monitoring with load-tested baselines, and full CI/CD via GitHub Actions – lint, test, multi-arch Docker builds (amd64/arm64), gated production deploy (Python, Kubernetes, Docker, AWS)
 - Launchpad – OpenAI Codex-powered project scaffolding tool; app to demo LLM pair programming (Codex-CLI) with calls to Codex MCP server for live code regeneration in-flight – e-commerce storefront generation within the app
 - Miasma – Privacy protection platform with web scraping, campaign management, and automated data injection (Python, React, FastAPI, PostgreSQL, Redis, Docker, GitHub Actions)
 - Reddit Translation Bot (Python, Telegram API, Google Translate API) – Cloud-deployed on Heroku
